

# Connecting your **DStv Explora** to the internet using the **DStv WiFi Connector** (automatic setup)

If you want to connect your **DStv Explora** to your router in your home, it's best to use the **DStv WiFi Connector** if your router's in another room or when you don't want to run cables. WiFi signal must be available in the room your **DStv Explora** is in.

There are two options:

- **Automatic setup** (if your router has a WPS button)
- **Manual setup** (if your router does not have a WPS button, or if you are unable to set it up using the automatic setup)

These are the steps for the **AUTOMATIC** setup

## Step 1

- Using the supplied power cable, insert one end into the USB port on the back of the **DStv Explora** and the other end into the power input on the back of the **DStv WiFi Connector**.

## Step 2

- The Power LED on the front of the **DStv WiFi Connector** should glow *solid amber* and then change to *solid white* (confirming it has power).

## Step 3

- Press the **WPS button** on your router, followed by the **WPS button** on the **DStv WiFi Connector**.
- Wait two minutes.

- The Wireless LED on the front of the **DStv WiFi Connector** will *flash white* (while the WPS is in progress) and change to *solid white* (once an internet connection has been established).

### TROUBLESHOOTING

- If the Wireless LED on the **DStv WiFi Connector** *flashes amber*, there's a WPS error or security type / password mismatch. We recommend you use the manual setup.
- If the Wireless LED on the **DStv WiFi Connector** is *solid amber*, the internet connection is weak. Move the **DStv WiFi Connector** closer to the router and try again.

## Step 4

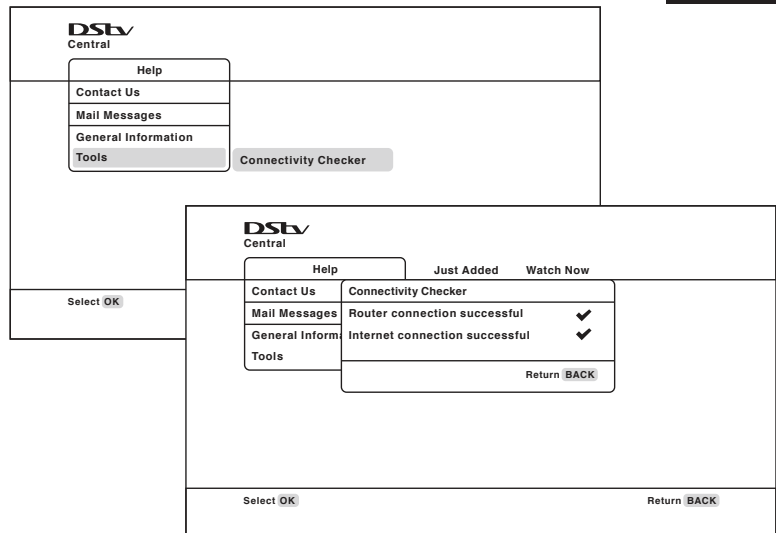

- Using the supplied Ethernet cable, insert the one end into the green Ethernet port on the back of the **DStv Explora**. Now insert the other end into the Ethernet port on the back of the **DStv WiFi Connector**.

## Step 5

You can now check the connectivity on your **DStv Explora**.

- Press **HELP** on the remote.
- Select **"Tools"**.
- Select **"Connectivity Checker"** and press **OK**.

## Step 6

The default setting for all Connected Services on your **DStv Explora** is set to "Off". You can manually select which of the services you want enabled.

- Press the blue **DStv** button.
- Select **"Settings"**.
- Select **"User Preferences"**.
- Select **"Connected Services"**.
- You can then set each of the Connected Services **"On"** or **"Off"** individually.
- Press **BACK** to save your setting.
